

Project Development Phase Performance Test

Date	11 September 2026
Project Name	Laptop Request Management System
Maximum Marks	10 Marks

System Performance Testing:

Project team shall fill the following information in the system performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Request Data	ServiceNow laptop request records contain requester, laptop requirement, request status, approval status, and fulfillment-related details. 
2.	Data Validation	Required request information is validated during submission. The configured Business Rule prevents duplicate laptop requests for the same user within the current calendar year. 

3.	Utilization of Filters	Laptop request records can be searched and filtered using available list conditions such as requester, request status, and approval-related information. 
4.	Calculated / Derived Information	The current Laptop Request Management System does not use separate calculated or derived information fields for performance testing. Value: Not Applicable.
5.	Dashboard Design	No separate dashboard visualization was implemented in the current version of the Laptop Request Management System. No. of Visualizations / Graphs: Not Applicable.
6.	Report / Story Design	No separate report or story visualization was implemented in the current version of the Laptop Request Management System. No. of Visualizations / Reports: Not Applicable.

Conclusion:

The Laptop Request Management System was reviewed for request data, data validation, record filtering, workflow-related information, and the availability of reporting and dashboard functionality. The implemented ServiceNow workflow supports laptop request submission, validation, manager approval, role-based access, notifications, and request tracking.

Note:

Only actual ServiceNow features and screenshots should be inserted. Do not add screenshots for features that were not implemented. Use “Not Applicable” where a feature is not part of the project.
