

**Project Design Phase-II**  
**Solution Requirements (Functional & Non-functional)**

|               |                                  |
|---------------|----------------------------------|
| Date          | 11 September 2026                |
| Project Name  | Laptop Request Management System |
| Maximum Marks | 4 Marks                          |

**Functional Requirements:**

**Laptop Request Management System – Solution Requirements**

Following are the functional requirements of the proposed solution.

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task)                                                                |
|--------|-------------------------------|---------------------------------------------------------------------------------------------------|
| FR-1   | Laptop Request Management     | Submit laptop request<br>Enter employee and laptop requirements<br>View request status            |
| FR-2   | Approval Management           | Manager reviews request<br>Approve or reject request<br>Add approval comments                     |
| FR-3   | Laptop Inventory Management   | View available laptops<br>Maintain laptop details<br>Assign laptop to approved request            |
| FR-4   | Notification Management       | Send request confirmation<br>Send approval/rejection notification<br>Send assignment notification |

**Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

| FR No. | Non-Functional Requirement | Description                                                                                                    |
|--------|----------------------------|----------------------------------------------------------------------------------------------------------------|
| NFR-1  | Usability                  | The system should provide a simple and user-friendly interface for employees, managers, and IT administrators. |
| NFR-2  | Security                   | Only authorized users should be able to access requests, approvals, and laptop inventory information.          |
| NFR-3  | Reliability                | The system should accurately store and process laptop requests without data loss.                              |
| NFR-4  | Performance                | The system should respond quickly when submitting, approving, and tracking requests.                           |

|       |              |                                                                                                            |
|-------|--------------|------------------------------------------------------------------------------------------------------------|
| NFR-5 | Availability | The system should be available whenever employees and IT administrators need to submit or manage requests. |
| NFR-6 | Scalability  | The system should support an increasing number of employees, laptop requests, and inventory records.       |
